One of the basic principles of green cleaning is to protect the health of the people that live, work, visit or study in the buildings we maintain, not just to make the buildings shiny. Green cleaning gives us the opportunity to create a truly clean environment while taking into consideration the impact our methods and products might have on human health and the planet, both short and long term. Since we don't always know what those consequences are, it is a good idea to make conservative, eco-conscious choices.
