Some of the most beautiful and low-maintenance landscaping these days is also what is known as "xeriscaping," or landscaping that does not require supplemental watering. As fresh-water resources are becoming scarcer and more expensive worldwide, you will see more commercial buildings moving toward using drought-tolerant plants and groundcovers. Not only does xeriscaping lower water bills, it requires less maintenance and little or no lawn mowing. Although it requires a bit more startup work than laying sod, the benefits endure for years.
